Projects

Finance. Helper | https://github.com/MichaelFellas/Finance.Helper |
https://project-3-finance-helper.herokuapp.com/ | Sole Author

- This MERN app is designed for users to take advantage of semi complicated budgeting and financial tools not usually available for free.
- This project allows users to track savings goals, see upcoming bills and get a detailed breakdown of bills added to see where their money is going. Worked alone to achieve this.
- Tools/Languages: HTML5, CSS, Javascript, React, Bcrypt, Ant Design Framework, GraphQL, JWT, Mongoose, Express, MongoDB, Node.js, Apollo, Moment, ReCharts, Styled-Components, Font Awesome

Doggy Day Care | https://github.com/opticsl8b/Doggy-Day-Care | https://doggy-day-care-gula.herokuapp.com | Allrounder, worked on Express routing, SQL database queries, SQL database structure, Handlebar MVC, HTML page layouts, nodemailer implementation and CSS design.

- This app was created for a hypothetical doggy day care business that allows customers to create a profile for each dog they own and book them in for day care and other services the bussiness may offer.
- This project allows Dog owners to easily book their dogs into Daycare. Worked in a group of four to achieve this.
- Tools/Languages: HTML5, CSS, Javascript, Handlebars.js, Express, Node.js, MYSQL2, Express Session, Bcrypt, Heroku, Dotenv, Sequelize, Bootstrap Framework, Moment.js, Nodemailer, JAWSdb.

Employee Database | https://github.com/MichaelFellas/Employee-Tracker |
https://drive.google.com/file/d/1lnkmcvSq1GwQ8K4DTxmySOYP21lP0pDT/view | Sole Author

- This app was created for a hypothetical business that needed to track its employees, it is backend only and must be run in NodeJS.

- This app allows a business to track its employees positions throughout the company, from the CEO to drivers, it also offers other functions such as being able to view cost by department, employees by manager.
- Tools/Languages: Javascript, NodeJS, SQL, Sequelize, dotenv, console.table, inquirer.

Weather Dashboard | https://github.com/MichaelFellas/Weather-Dashboard | https://michaelfellas.github.io/Weather-Dashboard/ | Sole Author

- This app displays the current weather and 5 day forecast for a city that the user searches.
- This app allows a user to search for a city and find the current weather and also a 5 days forecast relying on data from the Open Weather API, automatically saves the users past searches allowing a quick reload without having to search.
- Tools/Languages: HTML5. CSS, Bootstrap, OpenWeatherAPI, GoogleMapsAPI, Javascript, JQuery

Marvel Fan Club | https://github.com/HannahAB777/Marvel-Fan-Site | https://hannahab777.github.io/Marvel-Fan-Site/ | Allrounder, worked mainly on the API requests, Javascript, CSS design and custom assets.

- This app takes a pre-selected group or marvel heroes that the user can choose between and displays marvel information about each character and movie information about a movie that character was in.
- This project allows Marvel fans to learn more about their favorite characters and which movies they can watch them in. Worked in a group of two to achieve this.
- Tools/Languages: HTML5, CSS, Javascript, JQuery, Photoshop, MarvelAPI, OMBDAPI, Materialize CSS framework
